

WHAT IS CLAIMED IS:

1. A control device for remotely controlling a controlled device connected to a network, comprising:

display means for displaying a control panel of
5 said controlled device; and

sending means for sending operation information representing a shifting history of a cursor displayed on said control panel to said controlled device.

10 2. A control device according to claim 1, wherein said control device is a television and said controlled device is a video cassette recorder.

15 3. A control device according to claim 1, wherein said control device is a television and said controlled device is a digital photo-album device.

20 4. A control device according to claim 1, 2 or 3, wherein said network is a serial bus based on IEEE 1394-1995 standard.

5. A controlled device controlled remotely by a control device connected to a network, comprising:

25 sending means for sending a control panel of said controlled device to said control device;

receiving means for receiving operation information representing a shifting history of a cursor

displayed on said control panel; and

control means for controlling a function
corresponding to the operation information.

5 6. a controlled device according to claim 5,
wherein said control device is a television and said
controlled device is a video cassette recorder.

10 7. A controlled device according to claim 5,
wherein said control device is a television and said
controlled device is a digital photo-album device.

15 8. A controlled device according to claim 5, 6 or
7, wherein said network is a serial bus based on IEEE
1394-1995 standard.
